

going beyond distribution

Need more than just parts?

We offer complete automation solutions and services that accelerate your time to market

Capabilities at a glance

iAutomation has a pool of system engineers ready to work with you on a wide range of applications:

- + Controls Software Development
- + HMI Software Development
- + Vision Software Development
- + Motion Control Software Development
- + Robotics Programming
- + System Concept Engineering
- + Diagnostics and Simulation
- + Remote Maintenance
- + Systems Design and Planning
- + Software Training and Support

Featured Automation Solution Partners

ABB

B&R

FESTO

and more...

Software Development

We deliver software tailored to match the needs and operations of your custom engineered solutions. Software development capabilities enable iAutomation to offer customers comprehensive, fully customized solutions.

Diagnostics & Simulation

Our software provides a wide selection of diagnostic tools for reading system information and for optimizing the system. Using the System Diagnostics Manager, extensive information about the target system can be read using standard web access.

Remote Maintenance

Remote diagnostic and maintenance tools help you minimize service travel expenses and lower the risk of prolonged downtime. We can assist you with implementing your remote services capabilities

Application Commissioning & Support

Consultation during definition and evaluation phase; Consistent oversight of complex engineering projects; project management, development of specifications, conceptual software design, implementation, commissioning

Training & Support

We offer flexible training modules to meet your goals. Our customer-oriented training programs focus in the areas of control technology, safety technology, visualization, motion control, and robotics.
